As for rainfall, it has not been a typical June where we see our rainy season get underway with east to southeast flow around the Bermuda High. For almost the entire month we've had upper level troughing over the eastern U.S. holding the ridge axis south of the area which has kept a persistent southwest to west flow across the region. We have seen several rounds of thunderstorms move in from the Gulf of Mexico on different days, dumping locally heavy rainfall in some locations, especially across Levy County. However, on many days the region has remained mostly dry with the showers and thunderstorms mainly over the eastern half of the Florida peninsula. Therefore, rainfall amounts have varied from well below normal along parts of the west coast to well above normal over the interior and northern Nature Coast.
